

Sadegh Analooee

ABOUT ME

I am a front-end and Web-app developer and a passionate freelancer with one year of experience. which includes mastering React technologies, working with APIs, communicating between front and back end, and fully responsive website design.

I am capable of building various types of websites such as personal, office, and online stores. My goal is to create beautiful and functional websites tailored to the specific needs of my clients, always exploring new and innovative ways to do so. I am a team player, committed to progress and continuously expanding my knowledge.

EDUCATION

Biomedical Engineering (BSc , Payam-Noor Iran-Tehran)

SKILLS

Skill	Description
CSS & HTML	Creating the initial page layout and responsive design across various devices according to website design.
Bootstrap	Optimizing the style and creating more regular and better styles, resulting in a better user interface with the help of this preprocessor and library.
SASS	Optimize and organize your style with the help of this preprocessor.
React.js	With the help of this library, one can create single-page applications and develop manageable and reusable functional components.
Next.js	Building multi-page applications and websites with better SEO using this library and creating manageable and reusable functional components.
React Hooks	Using useState, useEffect, useContext, etc. to improve React's performance, and make the code more organized and readable.
Fetch & Axios	Perform all data operations on the server using GET, PUSH, and DELETE methods and communicate with the server using APIs.
NPM	For implementing popular libraries in react.js and next.js projects, using Node Package Manager is recommended.
JavaScript	Using this powerful language to create dynamic websites and connect front-end with back-end, as well as creating a series of special animations.
Redux	Managing states and minimizing props in large-scale projects
Typescript	For easier debugging and more precise control over input types, it is necessary to identify the data type of values.
Local-storage	To save user data in the browser and prevent data loss during page refresh
Git & GitHub	Using these repositories can lead to better project management and facilitate teamwork for project completion.

EXPERIENCES

Company	Description	Start	End
Webintern	<u>Part-time collaboration (remote)</u> - as a technical support for Frontend students	2024/3	--

PROJECTS

Title	Description
Collaboration with the Ronak Software Dolphin Company in the 3D file display panel project (.ifc)	In this project, a user panel was created to display 3D models (.ifc files) using a canvas. The panel consists of 4 pages: 1. Login page 2. Projects page: This page displays all projects and allows users to create new projects and delete existing ones. 3. Each project page: This page displays the uploaded files for each project and allows users to add or delete files. 4. 3D file display page
